HOW TO CONNECT

Always use special speaker cable to connect your amp to this speaker cabinet.

Dear Customer,

Thank you for choosing a Custom Cabinet from Koch. These cabinets have been designed and built by people who, from their own experience as musicians, take guitar tone very seriously. Our Custom Cabinets are tuned and optimized for the best tone from any guitar amplifier. They are constructed with the highest quality materials available and built to the highest standards.

Besides this we offer a unique choice of options to give each Custom Cabinet a personal touch. Please take the time to study this connection diagram before you put your cabinet into operation. Also fill in the warranty card and (e)mail it to us. We hope you will enjoy your new guitar cabinet and experience a whole new palette of lushful tones.

(One or two
separate
mono
amplifiers

In this Dual Mono mode the grounds of the (paired) speakers are fully separated. This prevents ground loops and other connection problems in the speaker circuit. It does not prevent ground loops in other parts of the system.
